

# Advanced Programming

## ASSIGNMENT 10

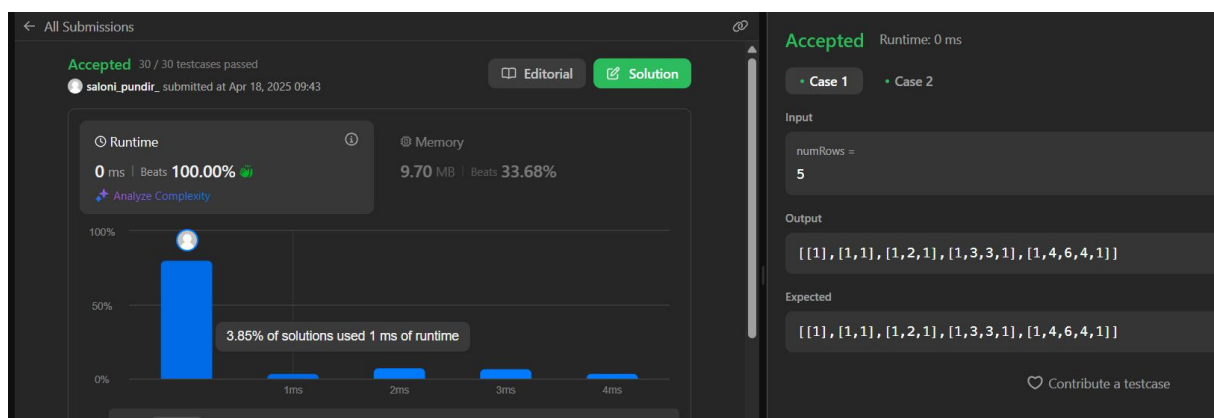

### Q1. Pascal's Triangle.

Code:

```
C++ ✓ Auto

1  class Solution {
2  public:
3      vector<vector<int>> generate(int numRows) {
4          vector<vector<int>> output(numRows);
5          for(int i=0; i<numRows; i++){
6              output[i].resize(i+1, 1);
7              for(int j=1; j<i; j++){
8                  output[i][j] = output[i-1][j-1] + output[i-1][j];
9              }
10         }
11         return output;
12     }
13 };
14
15
```

Output:

Q2.hamming distance.

Code:

```
C++  Auto

1  class Solution {
2  public:
3      int hammingDistance(int x, int y) {
4          return __builtin_popcount(x^y);
5      }
6  };
```

Output:

**Accepted** Runtime: 0 ms

• Case 1 • Case 2

Input

x =  
1

y =  
4

Output

2

Expected

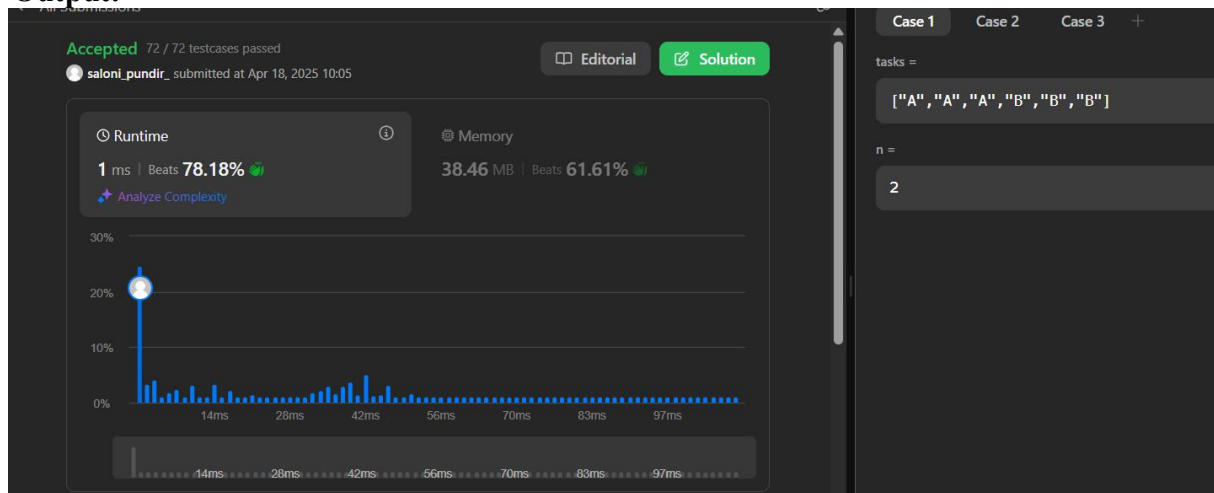

2

### Q3. Task Scheduler.

Code:

```
Code | Testcase | Test Result
C++ | Auto
1 class Solution {
2 public:
3
4 int rem(vector<int> map, int T){
5     int sum = 0;
6     for(int i: map ){
7         if(i>T){
8             sum += i - T;
9         }
10    }
11    return sum;
12 }
13
14 int leastInterval(vector<char>& task, int n) {
15     if(task.size() == 1) return 1;
16
17     vector<int> map(26,0);
18     int t = 0;
19     unordered_set<char> s;
20     for(char ch: task){
21         map[ch-'A']++;
22         s.insert(ch);
23     }
24
25     int greatest = -1, ind = -1;
26     for(int i= 0; i<26; i++){
27         if(map[i]> greatest){
28             greatest = map[i];
29             ind = i;
```

Output:

#### Q4. Number of 1 Bits.

Code:

```
C++  Auto

1  class Solution {
2  public:
3      int hammingWeight(uint32_t n) {
4          int res = 0;
5          for (int i = 0; i < 32; i++) {
6              if ((n >> i) & 1) {
7                  res += 1;
8              }
9          }
10         return res;
11     }
12 };|
```

Output:
